

# RaceDay Event Management System

## Entity Relationship Diagram (ERD) - Part 1

PK = Primary Key | FK = Foreign Key | UQ = Unique constraint

### Design notes:

- USER stores both system roles. Role values are Organiser and Participant.
- ENROLMENT resolves the many-to-many relationship between Participants and Events.
- A Participant selects one Category when enrolling for an Event.
- An Enrolment can exist before a Result is recorded, therefore Result is optional (0..1).
- This ERD is the baseline that the Part 1 SQL script should match.
